KEY VALUE PROPOSITION

Project 34 — CrisisCommand Future State

ENHANCE

Remaining FY Spend: \$11.2M

NPV: \$1.0M

Cur-ly Revenue: \$7.3M

CrisisCommand.ai is the one human-governed crisis platform where an institution's leaders see the facts, decide with named authority, alert and act, hold every stakeholder to one approved posture, prove what was done, and learn — so the next crisis begins from the last one's record, never from a blank page.

PRODUCT IN ONE SENTENCE The operating loop: operational truth → executive judgment → approved decision → named action → evidence → stakeholder response → replay → improvement. The ladder: govern first (2027) · absorb by the one-ninth gate (2030) · humanity's shared crisis memory (2525).

PRODUCT STRATEGY

Thesis: ONE platform. CrisisCommand.ai carries every aspect of the benchmark's critical-event job — alert, workflow, continuity, risk feed — inside the governed leadership record: judgment → approved action → evidence → stakeholder response → learning.

Validate ten deltas: decision rights · approval state · action ownership · acknowledgement · evidence · current-plan state · cross-system context · outcome-linked replay · time-to-coherence · simulation. The economic lens stays internal (\$14 / \$15).

RECOMMENDATION · ASK FOR THE GATE

G2 ask: approve the EDU / Rave, FOOD / Everbridge 360 AI and TECH / PagerDuty tear-downs with buyer interviews, the EDU measurement-design tabletop, workflow prototypes, segment value equations, CTS discovery and \$16 evidence tracking; G3 A/B simulation only after the G2 measurement design is credible.

MARKET OPPORTUNITY · PIPELINE

TARGET SEGMENT / CUSTOMER Benchmark: Everbridge 360 AI / Bridge — carried whole inside CrisisCommand.ai. Comparators: EDU → Rave · FOOD → Everbridge · TECH → PagerDuty. Validation order EDU → FOOD → TECH, not a TAM ranking.

OPPORTUNITY	CUSTOMER	AWARD	VALUE
1 · Trust & Governance Under Pressure	EDU — first proof	Rave	Rave protects and communicates; CrisisCommand decides, approves, owns
2 · Product Safety & Recall	FOOD — second proof	Everbridge 360 AI / Bridge	Everbridge coordinates the event; CrisisCommand governs the judgment
3 · Digital Trust Under Technical Pressure	TECH — scale-potential	PagerDuty	PagerDuty runs the incident; CrisisCommand runs leadership's response

ROADMAP SNAPSHOT

- Today: Understand → Structure → Align → Communicate → Manage → Prepare / Simulate.
- Future extension: Understand → Judge → Align → Approve → Assign → Acknowledge → Communicate → Observe → Replay → Improve.
- Horizon 1 (2027) Governed Leadership State, native, with every benchmark function reachable from inside the platform · Horizon 2 (→ 2030) the critical-event surface absorbed function by function under the one-ninth gate, alerting last · Horizon 3 Enterprise Decision Graph · Horizon 4 Recursive Readiness (2525).
- Gates: G2 validates the measurement design (interviews, NBA teardown, prototype, one pre-registered EDU tabletop) · G3 runs the instrumented A/B.

TOP RISKS + DEPENDENCIES

- Absorbing the benchmark's surface before the leadership proof (Everbridge-lite); life-safety alerting liability inside one platform.
- Existing CrisisCommand features are presented as future.
- \$/minute becomes false precision; simulation becomes theater.
- Old DRS resource thesis returns; a new SKU invented before WTP evidence.
- AI appears to command once the platform sends and tasks; single-platform concentration during the event; segment sprawl.

STAGE / STATUS

G2 / future-state validation · customer-facing product CrisisCommand.ai · internal innovation method De-Risking Strategies / Project 34 · edition v1.0 ONE PLATFORM (operator 2026-09-24 + the twelve-lens review) over the v0.9 gate manuscript (eXeL) and the v0.9 narrative (Grok); v0.8.2 for S16 / S19 detail; v0.4 / v0.5 retired · rev 0.010 · decision register D1-D12 and the iteration ledger in docs/drs (append-only).

FINANCIAL COMMENTS · ASSUMPTIONS

- Financial RESET (v0.9 S17): do not reuse old BRS prices, SAM, SOM, NPV, IRR or CTS. New market model: reachable accounts × validated annual value × realistic conversion = serviceable opportunity.
- Financial model — DECLARED (IA), not buyer-validated: one Pro Enterprise institution · verified 250 \$/min (IA) × 90 leadership-delay minutes removed × 4 events a year = 90 k time value · 30 k discrete avoided cost · 60 k risk-adjusted outcome (range midpoint) → 180 k modeled value per customer-year · 33 % capture → 60 k annual price.
- Ramp (IA): 6 paying accounts in 2027 → 15 · 30 · 60 (2030) → 640 by 2036 at 60 k, then 120 k a year once the benchmark's functions are native (2031+) = 2,121 account-years, 248 M ten-year revenue, 3-year CAGR 2027 → 2030 = 115 %. Resources every year 2026-2036: 11.2 M in total (build 2027-2029, then platform R&D, knowledge base and customer success). NPV proxy +1.0 M at the G2 weighting (tech med × comm high = 0.18); a G3 pass roughly doubles it. The return profile, S10 and S14 derive from this eleven-year record.
- Value equation (S14): Verified \$/min = direct time-dependent cost + elapsed minutes · Time Value = verified \$/min × leadership-delay minutes reduced · Risk-Adjusted Value = (P(loss) before – P(loss) after) × consequence value, ranges only · Modeled Value = Time Value + Discrete Avoided Cost + Risk-Adjusted Outcome Value · Contribution = validated WTP – CrisisCommand-specific CTS.
- No price is supported until a buyer validates baseline, delta, economic weight, attribution and willingness to pay.

Customer CONOPS

Req: Concept+

G1 · Concept · S4

Business: Crisis + Resilience Project #: PRJ-34 Source: Market Needs

→ OPERATIONAL CONCEPT, IN ORDER

- 1 Event → operational facts.
- 2 Strategic exposure.
- 3 Objectives.
- 4 Leadership options.
- 5 Cabinet alignment.
- 6 Approved posture — under explicit decision rights.
- 7 Named action owners.
- 8 Stakeholder strategy → communications → the community answers back.
- 9 Acknowledgement / evidence.
- 10 Current-plan update.

→ FUTURE CAPABILITIES

- Signature outcome (EDU): time from event recognition to one approved institutional posture.
- FOOD CONOPS: operational / quality fact → enterprise severity judgment → cross-domain exposure → objectives → regulator / customer / franchisee / employee / investor posture → executive approval → named actions → synchronized communications → evidence / acknowledgement → current-plan update. Signature: time from material product fact to approved enterprise severity and stakeholder posture.
- TECH CONOPS: PagerDuty / security fact → business exposure → objectives → legal / regulatory / customer / investor implications → executive options → approved posture → named non-technical actions → stakeholder communications → evidence / acknowledgement → plan update as technical state changes. Signature: time from technical severity established to approved executive / customer / regulator posture.

Customer Problem

Req: Concept+

G1 · Concept · S5

Business: Crisis + Resilience Project #: PRJ-34 Source: Market Needs

▲ PROBLEM STATEMENT

In a high-pressure incident, leaders across reputation, operations, legal, regulatory, financial, safety and stakeholder domains have no governed layer that turns incident context into aligned executive decisions, governed action, coherent stakeholder response and reusable learning: operational truth lives in specialist systems, judgment happens in meetings, and the record of who decided what, why, who owned it and what happened next is reconstructed afterwards. Two systems — one to respond, one to decide — split the record; the future state is one platform.

→ CUSTOMER OUTCOMES

- Establish one strategic picture; define objectives and tradeoffs; know who has authority to decide.
- Approve one current posture; assign consequential actions; confirm those actions were accepted or completed.
- Keep communications synchronized to the approved posture; understand what changed and why.
- Compare decisions with outcomes; improve the next event.

→ CUSTOMER WHY'S

- EDU: leadership must align safety, governance, legal, communications, reputation, student, parent, faculty, trustee, donor, athletics and community expectations while facts keep changing.
- FOOD: a product, quality, contamination, recall, supplier, workforce or brand event rapidly crosses operations, legal, regulatory, customer, franchisee, employee, investor and reputation domains.
- TECH: a technical outage, cyber event, data breach, product failure, AI failure or platform incident becomes an enterprise crisis when it creates customer, legal, regulatory, investor, employee, financial and reputation consequences.
- Alerts, incident workflows and status pages do not create executive alignment; consequential message and action forks are the symptom.

▲ PROBLEMS WITH THE STATUS QUO

- EDU — Rave is strong at alert → safety communication → responder / community coordination; CrisisCommand future state: judge → align → approve → govern posture → learn.
- FOOD — Everbridge 360 AI / Bridge is strong at risk intelligence → continuity → response workflow → coordinated action → operational improvement; CrisisCommand: enterprise judgment → stakeholder tradeoffs → executive approval → governed posture → outcome-linked replay.
- TECH — PagerDuty is strong at detect / mobilize → remediate → status → technical stakeholder updates; CrisisCommand: interpret business consequence → align executives → approve enterprise posture → govern external stakeholder strategy → learn.
- Not unique by themselves: better decisions · AI advisor · continuous improvement · crisis management · executive dashboards · alerts · tasks · locked plans.

Product Summary

Req: Concept+

G1 · Concept · S6

Business: Crisis + Resilience Project #: PRJ-34 Source: Business Case

◆ SINGLE-SENTENCE OVERVIEW · ✎ EDIT VALUE PROP

CrisisCommand.ai is the one human-governed crisis platform where an institution's leaders see the facts, decide with named authority, alert and act, hold every stakeholder to one approved posture, prove what was done, and learn — so the next crisis begins from the last one's record, never from a blank page.

▲ PROBLEM STATEMENT

- Product boundary, future state: ONE platform. CrisisCommand.ai carries every aspect of the benchmark's critical-event job — risk intelligence, emergency communications, incident workflow, coordinated action, continuity — inside the governed leadership record, absorbed by qualification (2027 reachable from inside the platform · 2030 native, function by function, alerting last and certified). Not a recall / quality system, a clinical-record system or a physical-resource system: those facts arrive by pointer and never become the platform's.
- Current foundation (do not re-sell as new): structured crisis workflow · facts / intake · objectives · stakeholder analysis · message development · pressure testing · SITREPs · near-term planning · sector intelligence · case / scenario libraries · organization-specific enterprise context · historical / continuous learning.

→ CONOPS + APPLICATIONS

- Architecture — 1 Operational Context (INPUT): selected facts / status from Rave in EDU, Everbridge / quality / recall systems in FOOD, PagerDuty / security / status systems in TECH, approved human inputs — the operational systems of record today, absorbed into the platform by qualification → 2 CrisisCommand (LEADERSHIP GOVERNANCE) owns: strategic picture · objectives · exposure analysis · stakeholder priorities · executive options · decision rights · approvals · rationale · action owners · current-plan state · communications posture · escalation watchpoints → 3 Execution (OUTPUT): approved actions route to operational systems, collaboration tools, human owners, external communications systems → 4 Evidence + Learning (RETURN): acknowledgement · execution evidence · stakeholder response · outcome · plan revision · replay · readiness implication.
- Operational truth in → human judgment → approved action out → evidence back → learning compounds.

Business: Crisis + Resilience Project #: PRJ-34 Source: Market Needs

→ PERSONAS AND WHAT THEY WANT	
PERSONA	WANTS...
Leaders under pressure - EDU · FOOD · TECH (Pro Team / Pro Enterprise)	One governed environment for strategic judgment and coordinated leadership action across reputation, operations, legal, regulatory, financial, safety and stakeholder domains
Leaders under pressure - EDU · FOOD · TECH (Pro Team / Pro Enterprise)	Explicit decision rights and approval state

→ DESIRED OUTCOME

Every approved decision carries who may decide it, its sign-off state, the named owner, an acknowledgement (accepted / started / completed / escalated), an evidence pointer and the versioned current-plan state — so the record answers what changed, why, who approved, and what happened next.

KEY CUSTOMER BENEFITS

- Whitespace EDU (above Rave): executive decision rights · cabinet alignment · governance interpretation · stakeholder tradeoffs · approved institutional posture · action ownership · approval / rationale provenance · board / parent / faculty / donor strategy · outcome-linked replay.
- Whitespace FOOD (above Everbridge): enterprise severity judgment · brand / legal / regulatory tradeoffs · executive decision rights · stakeholder strategy across customers / regulators / franchisees / employees / investors · approval provenance · one approved enterprise posture · action / message synchronization · outcome-linked replay.
- Whitespace TECH (above PagerDuty): enterprise meaning of the technical event · reputation / legal / regulatory / financial exposure · executive options and tradeoffs · decision rights · approval provenance · customer / regulator / investor posture · board-ready current strategy · action ownership outside the technical response · outcome-linked replay.
- Priced as a DECLARED single-customer baseline (IA): 180 k modeled value per customer-year, 60 k captured — rebuilt from buyer-verified inputs at G3 (\$14 / \$15); no old DRS dollar table is carried.

KEY TECHNICAL FEATURES

- 1 Explicit decision-right governance.
- 2 Visible approval / sign-off state.
- 3 Action ownership tied to approved decisions.
- 4 Action acknowledgement.
- 5 Execution evidence.
- 6 Formal current-plan state.
- 7 Selected cross-system operational context.
- 8 Outcome-linked replay · 9 time-to-coherence measurement · 10 risk / outcome simulation.

→ HIGH-PRIORITY USER STORIES · ↗ EDIT SOURCE

MVP 1.0 — ONE GOVERNED ENVIRONMENT FOR STRATEGIC JUDGMENT AND COORDINATED LEADERSHIP ACTION ACROSS REPUTATION, OPERATIONS, LEGAL, REGULATORY, FINANCIAL, SAFETY AND STAKEHOLDER DOMAINS (CORE)

As a leaders under pressure · EDU · FOOD · TECH (Pro Team / Pro Enterprise) operator, I want one governed environment for strategic judgment and coordinated leadership action across reputation, operations, legal, regulatory, financial, safety and stakeholder domains so that explicit decision rights and approval state becomes routine.

As the System, I want one platform: the governed leadership record (decision rights · approval · ownership · acknowledgement · evidence · current plan · replay) plus, by qualification, every aspect of the benchmark's job (Everbridge 360 AI / Bridge) available at run time so that one governed environment for strategic judgment and coordinated leadership action across reputation, operations, legal, regulatory, financial, safety and stakeholder domains is met without operator intervention.

MVP 2.0 — ACTION OWNERSHIP, ACKNOWLEDGEMENT AND EVIDENCE TIED TO THE STRATEGIC RECORD (FIELD)

As a leaders under pressure · EDU · FOOD · TECH (Pro Team / Pro Enterprise) program lead, I want faster time to coherent, approved leadership action, with a traceable record of what was known, decided, owned and what happened next so that action ownership, acknowledgement and evidence tied to the strategic record is achievable in the field.

As a Lead/Developer, I want absorb by the R-CORE ladder: every benchmark function reachable from inside the platform in 2027, native by 2030 after each beats the benchmark on its clock by the one-ninth gate, alerting last and certified; Rave and PagerDuty as inbound feeds so that EDU → FOOD → TECH validation sequence (not a TAM rank); one primary NBA each — Rave · Everbridge 360 AI / Bridge · PagerDuty is reproducible.

MVP 3.0 — EXPLICIT DECISION RIGHTS AND APPROVAL STATE (SCALE)

As a leaders under pressure · EDU · FOOD · TECH (Pro Team / Pro Enterprise) operator, I want action ownership, acknowledgement and evidence tied to the strategic record so that g2 pre-registered EDU tabletop proves the measurement design; G3 instrumented benchmark-alone vs one-platform A/B proves value carries into production.

As the System, I want one platform: the governed leadership record (decision rights · approval · ownership · acknowledgement · evidence · current plan · replay) plus, by qualification, every aspect of the benchmark's job (Everbridge 360 AI / Bridge) to hold at mission scale so that explicit decision rights and approval state survives a

COGS \$61k MSRP \$149k Mgn. 59%

Go-To-Market

Req: Develop+
G3 · Develop · S12

Business: Crisis + Resilience Project #: PRJ-34 Source: Marketing Strategy

→ L-90 · DRAFT LAUNCH PLAN

- Preserve the current commercial spine: Pro Team → Pro Enterprise (per the 23 Sep 2026 live-product verification). Do not invent a new named Project 34 SKU before evidence.
- Commercial forms follow the ladder: the governed leadership state inside the existing tiers first; each absorbed function priced only after it beats the benchmark on its clock and a buyer validates WTP above CTS.

→ L-60 · ALIGN & EXECUTE

- Future commercial forms to test (customer WTP + CTS determine the form): capability expansion in the enterprise tier · enterprise integration package · additional organizational instance · advisor / consultant operating model · event / usage construct.
- CTS to measure: model / inference · sector intelligence maintenance · case / scenario maintenance · enterprise context onboarding · security / isolation · integrations · support · customer success · simulation / tabletop support · expert review if included.

→ L-30 · FINAL DELIVERABLES

- Validation sequence: 1 EDU — first proof (Rave teardown, buyer interviews, measurement-design tabletop) · 2 FOOD — second proof (Everbridge 360 AI / Bridge teardown, buyer interviews) · 3 TECH — scale-potential (PagerDuty teardown, buyer interviews).
- This is a validation sequence, not a TAM ranking.

→ LAUNCH & OPTIMIZE

- Financial reset: reachable accounts × validated annual value × realistic conversion = serviceable opportunity; no old DRS prices, SAM, SOM, NPV, IRR or CTS.
- Design-partner path for the strongest validated segment; no price until a buyer validates baseline, delta, economic weight, attribution and willingness to pay.

Risk Highlights

Req: Develop+

G3 · Develop · S13

Business: Crisis + Resilience Project #: PRJ-34 Source: Business Case

▲ TECHNICAL RISKS			
LEVEL	TOPIC	COUNTER MEASURE	STATUS
High	Single-platform concentration — the platform's own outage during the event it serves	Degraded mode: the approved posture and the record survive on any phone; a completed approval is never discarded; no AI required to read the plan	Open
Med	AI appears to command once the platform sends, tasks and releases	Every outbound action carries its decision right, a named approver and a timestamp; Manual cadence by default, Semi-Automated earned per capability (R-CORE)	Mitigating
Med	Data / PHI boundary erodes under one platform	Classify at intake; sensitive facts arrive by pointer and never become the platform's; HEALTH stays outside PHI	Mitigating
Med	Simulation becomes theater	Pre-registered hypothesis, null and stop rule; timing, risk and outcome metrics declared before G3	Mitigating

▲ BUSINESS RISKS			
LEVEL	TOPIC	COUNTER MEASURE	STATUS
High	Existing CrisisCommand features are presented as future	Separate current foundation from future-state deltas	Open
Med	\$/minute becomes false precision	Use buyer-verified inputs and attribution	Mitigating
Med	Old DRS resource thesis returns	Physical-resource workflow only if segment evidence proves it	Mitigating
Med	The record is discoverable — a written rationale is what plaintiffs and regulators subpoena	Privilege-aware fields and counsel-marked entries as Horizon-1 objects; succession of decision rights and step-up identity for approvers	Mitigating

▲ COMMERCIAL RISKS			
LEVEL	TOPIC	COUNTER MEASURE	STATUS
High	Absorbing the benchmark's surface before the leadership proof (Everbridge-lite)	Govern first; absorb function by function only after each beats the benchmark on its pre-registered clock by the one-ninth gate	Mitigating
High	Life-safety alerting liability inside one platform	Alerting absorbed last, delivery-guaranteed and certified; partnered rails under a named human until then	Open
Med	Incumbent retaliation — pointer access cut, a bundled 'leadership module'	Sell to the C-suite door the incumbents do not hold; own the decision record; partnered rails are optional channels	Mitigating
Med	New SKU invented before WTP evidence	Preserve the current commercial spine until validated	Mitigating
Med	Segment sprawl	Validate EDU / FOOD / TECH first	Mitigating

▲ DEPENDENCIES — INTERNAL IRAD / CRAD	
- G2 exit: buyer confirms the need · primary NBA confirmed · current-state baseline confirmed · at least two future-state deltas survive comparison · measurable clock defined · economic weight can be sourced · CTS path understood · pilot willingness exists. - Master question (G2): can CrisisCommand prove that ONE human-governed platform — the leadership record plus, by qualification, every aspect of the benchmark's critical-event job — creates measurable incremental value above Everbridge 360 AI / Bridge in FOOD, Rave in EDU and PagerDuty in TECH, on a pre-registered clock, with a named human on every consequence?

Business: Crisis + Resilience Project #: PRJ-34 Source: Roadmap

\$ FTE # BY FUNCTION				
FUNCTION	YR 1	YR 2	YR 3	YR 4
CTS (CC-specific)	model / inference	sector intelligence upkeep	case / scenario upkeep	enterprise context onboarding
CTS (CC-specific)	security / isolation · integrations	support · customer success	simulation / tabletop support	expert review if included
Rule	CTS is product-finance evidence	not an old DRS import	no price until WTP clears CTS + hurdle	measure actual CTS per segment

\$ FTE \$ ESTIMATE			
FUNCTION	YR 1	YR 2	YR 3
EDU clock	event → approved president / cabinet posture	inputs: executive / legal / communications labor · advisor cost · message rework · parent / stakeholder response load · operational disruption tied to leadership delay	do not monetize student or public safety itself
	material product fact → approved enterprise severity / recall posture	inputs: leadership / legal / communications labor · advisor burn · recall coordination rework · franchisee / customer-support load · attributable unit / line / store exposure	ranges, never-guaranteed savings
TECH clock	technical severity established → approved executive / customer / regulator posture	inputs: executive / legal / communications labor · support surge · advisor burn · directly attributable transaction / revenue exposure · contractual / SLA exposure where leadership delay matters	never technical restoration minutes

ALIGNMENT NOTES

- Horizon 1 — Governed Leadership State: decision rights · approval state · action ownership · acknowledgement · evidence · governed current-plan state · outcome-linked replay.
- Horizon 2 — Absorb by qualification: every benchmark function reachable from inside the platform first (link, selected structured facts, status, action reference), then native function by function only after each beats Everbridge 360 AI / Bridge on its pre-registered clock by the one-ninth gate; Rave and PagerDuty facts flow in as inbound feeds; alerting last and certified.

→ PRE-LAUNCH BETA VOC			
# CUSTOMERS	DIFFERENTIATOR	VOC LEARNINGS	PIVOT / PURSUE / PASS
0 — EDU G2 tabletop (pre-registered)	Decision rights + approval state + action ownership vs Rave	Minutes event → approved objectives; # consequential revisions — measurement design proven, value not yet	Pursue — hypothesized
0 — FOOD	Enterprise severity judgment + approval provenance vs Everbridge 360 AI / Bridge	Minutes to agreed severity; # conflicting approved versions	Pursue — hypothesized
0 — TECH	Business-consequence interpretation + board-ready current posture vs PagerDuty	Time severity → approved executive posture; # contradictory versions	Pursue — hypothesized
0 — all	Outcome-linked replay	Facts → decision → rationale → action → stakeholder / business outcome, replayed	Pursue — hypothesized

■

IMPACT TO BUSINESS CASE / PRICING

No price is supported until a buyer validates baseline, delta, economic weight, attribution and willingness to pay. Contribution = validated WTP – CrisisCommand-specific CTS. Old DRS prices are not evidence; customer WTP + CTS determine the commercial form.

→ DEVELOPMENT PRIORITIES		
PRIORITY	FEATURE ENHANCEMENT	METHOD + TIMING
1	Horizon 1 — Governed Leadership State	G2 measurement-design tabletop → G3 instrumented A/B
2	Horizon 2 — Absorb the benchmark's surface by qualification (one-ninth gate), alerting last	After the leadership-layer wedge is proven; each function on its own clock
3	Horizon 3 — Enterprise Decision Graph	2030 horizon
4	Horizon 4 — Recursive Readiness (R-CORE-informed)	2030 → 2525

# CUSTOMERS	DIFFERENTIATOR	VOC LEARNINGS	PIVOT / PURSUE / PASS
Post-proof - all segments	Outcome-linked replay	Decisions compared with stakeholder / business outcomes across events	Pursue — hypothesized
Post-proof - enterprise tier	Enterprise Decision Graph	Extends the announced Enterprise Crisis Dashboard; multi-instance outcome replay	Pursue — hypothesized

PRIORITY	FEATURE ENHANCEMENT	TIMING
2027	Governed leadership state native — decision rights · approval state · action ownership · acknowledgement · evidence · current-plan state · replay — and every benchmark function reachable from inside the platform: one login, one record	Horizon 1
2030	The whole critical-event surface native, absorbed function by function under the one-ninth gate, alerting last and certified, multi-event learning · simulation · readiness qualification · the Enterprise Decision Graph	Horizons 2-4
2525	Humanity's shared, human-governed crisis memory: every institution's decisions, evidence and outcomes replayable across people, systems and generations in an open record; the affected community a participant, not only a recipient	Vision

- R-CORE is an architectural influence, not a CrisisCommand SKU. Loop: LIVE EVENT → OBSERVE → LEADERSHIP JUDGMENT → APPROVE → ACT → RECORD → REPLAY → SIMULATE → QUALIFY → IMPROVE.
- Absorption is a ladder, not a launch; pilot → replay → qualify → certify → adopt → educate → expand; autonomy is earned per capability, never granted; coordination without domination.
- AI recommends and organizes. Humans approve and own consequences. Humanity decides. Technology assists. Trust must be proven.

Business: Crisis + Resilience Project #: PRJ-34 Source: End-of-Life Plan

→ EOL-120 · DRAFT PLAN

- DECLARED (not in v0.9): retire a governance-state capability only after its successor keeps decision rights, approval state, action ownership, evidence and replay on the record.
- Export the decision history, plan versions, evidence and outcome-linked replay to the customer in an open format.

→ EOL-90 · ALIGN & EXECUTE

- Tier notice; Organizational Context and institutional memory handed over intact.
- Absorbed functions and partnered rails retired in the reverse order of absorption; nothing life-critical is switched off without a named successor channel.

→ EOL-60 · FINAL DELIVERABLES

- Final replay package delivered; the last approved current-plan state archived as a version.
- Escalation watchpoints and stakeholder posture closed with a named successor channel.

→ END OF LIFE · COMMUNICATION + EXECUTION

- End-of-life communication to leadership, crisis team and stakeholders through the approved posture.
- The last event's replay carried into the successor: the next crisis does not restart from a blank page.
- The decision register (D1-D12) and the iteration ledger travel with the record — every key decision, its revision and its author, replayable.
